

# Canadian Jigsaw Puzzle

Borders are imaginary lines traced on a map to identify the beginning and the end of a territory, a country, a province or a state.

On the map of Canada, the borders define the provinces and the territories. You may have already noticed that Canada resembles a group of polygons... a true jigsaw!

A jigsaw is a puzzle made up of pieces to be put together. I propose that you make one of them using a map of Canada.

**On the map, each province and territory has been outlined to form a polygon. Choose 3 of them. For each, identify the polygon and list 2 characteristics of these polygons.**

<b>Name of Province or Territory</b>	<b>Polygon (name)</b>	<b>2 Characteristics</b>
